SDRLogger+

The Ham Radio Logger Built for the Modern SDR Shack

◆ BETA RELEASE 2026 ◆

FREE	WINDOWS	REAL-TIME	TCI + HamLib
Always & Forever	Mac & Linux Soon	QSO Uploads	SDR Integration

SDRLogger+ is a next-generation, browser-based Ham Radio contact logger engineered for operators running TCI (Transceiver Control Interface®) by Expert Electronics — SDR applications such as the popular EESDR and Thetis SDR — or any HamLib-compatible radio. Log contacts, work DX, decode CW, control your rotator, and upload QSOs to every major service — all from a single, stunning interface.

- TCI Integration with EESDR & Thetis
- Built-in CW Keyer & Decoder
- FAST DX Cluster + Spotting
- Real-Time Solar Propagation Data
- Rotator Control (PstRotator / HamLib)
- QRZ · HamQTH Callsign Lookup
- Auto-Upload: QRZ · LoTW · Club Log
- Digital Modes: WSJT-X · JTDX · MSHV and more!
- POTA Activation Mode (separate databases)
- ADIF Export & Searchable Log

WHAT MAKES SDRLogger+ DIFFERENT?

TCI & HamLib — DUAL RADIO INTEGRATION

SDRLogger+ integrates with both TCI (EESDR, Thetis) and HamLib (rigctld) — covering virtually every modern transceiver. Tune your radio and the logger follows: frequency, mode, and audio fill in instantly. No plugins. No manual entry. Just log.

BUILT-IN CW KEYER & DECODER

A full-featured CW keyer and real-time soft-decoder lives inside SDRLogger+. Waterfall display, adjustable tone, AFC, squelch, macro messages, and auto-log on ‘73” — zero external apps required.

REAL-TIME QSO CONFIRMATIONS

Every saved QSO is automatically pushed to QRZ Logbook, ARRL LoTW, and Club Log — in real time, per contact. No batch uploads. No manual sync. Your award credits start accumulating the moment you click Save.

DIGITAL MODE INTEGRATION

WSJT-X, JTDX, MSHV, VarAC, and Log4OM feed directly into SDRLogger+ via UDP and TCP listeners. Digital QSOs are captured and logged automatically — your entire operation in one place.

DX CLUSTER & PROPAGATION

Live Telnet DX cluster spots callsigns directly into your log form. Color-coded solar data — SFI, A-index, K-index — plus a live band condition heatmap keep you on top of propagation without ever leaving the screen.

BROWSER-BASED FREEDOM

SDRLogger+ runs as a local web server on your shack PC. Access the logger from any browser on your network — laptop, tablet, or phone. Your log database stays on the host machine — local, private, and always yours.

BUILT IN PYTHON — RUNS EVERYWHERE

Because SDRLogger+ is built entirely in Python, porting to other platforms is straightforward. Windows users can download and install today — Mac and Linux builds are on the roadmap.

WINDOWS
✓ Available Now
Full Installer · System Tray
Auto Browser Launch

macOS
Coming Soon
Native .app Bundle
DMG Installer

Linux
Coming Soon
tar.gz + .deb Package
GNOME / KDE Ready

WHY GIVE SDRLogger+ A TRY?

01 It was built by hams who actually use it in their shacks every day.

02 It replaces 3–4 separate tools with one clean, integrated interface.

03 Your data never leaves your machine — no cloud, no subscriptions, ever.

04 It is completely free and always will be — MIT licensed, open to the community.

05 Regular updates driven by real feedback from operators just like you.

06 Getting started takes under 5 minutes — download, install, open browser, log.

07 Join the beta — your feedback directly shapes the features and future of SDRLogger+.
